

3120 Harness

Your ARC wire harness is a partially completed assembly. The reason being that there are so many varied car sizes, accessory positions, and module mounting locations possible that to go to any further level of completion would create a more difficult installation.

Your harness assembly consists of 11 color coded type THHN oil and gas resistant #14 gauge wires. This wire is very resistant to physical damage and its insulation is rugged.

Your wiring harness kit includes;

11 Color-coded leads.

Male and female plug connectors (the female end is to be connected to the lead from the module, the male end is to be connected to the accessory)

In line butt connectors.

1/4" quick connects

Cable mount buttons

Additional tie wraps
