**RacePak
V-Net Rollbar
Mount**

This product allows you to mount your V-Net Modules to the firewall or any flat surface in your race car.

Simply use 2 countersunk screws to mount the back plate to the flat surface. Once tight, place your Module Pack between the 2 posts as seen in the picture. Finally, screw the top plate into the posts with the supplied screws. The Modules will be securely mounted in your car.

As the picture above illustrates, use the 2 supplied flush head screws to mount the rollbar bracket to the V-Net Mount.

After mounting Back plate to the rollbar position V-Net Module into the mount and screw in the front plate with the 2 supplied button head screws.

If you have more than 5 modules you should use 2 mounts.
